

Shaping Alaska's Future

Academic Excellence in AP Physics

Yasent Oliver

AP Physics 1 is a challenging high school class that covers the content of the first semester of an algebra based college Physics class. This class is designed so that students have time to develop as Physicists by allowing for numerous investigation labs during the school year. Yasent demonstrates a high level of physical insight in his laboratory investigations. He also demonstrates a keen interest in science and an overall enthusiasm for learning that makes him a joy to have as a student. Yasent also obtained the highest score in both of my AP Physics 1 classes on a very difficult fall semester final.
