

# Shaping Alaska's Future

## Academic Excellence in Science & Mathematics

### John Dunlop

*Science: AP Chemistry is a very challenging high school class that covers the content of a full year of college Chemistry. Most high school students are unprepared for the amount of content that the class covers every week. John, however, already has the work ethic required to master challenging college level classes. John's dedication to producing high quality work in class and in the laboratory makes him a joy to have as a student. ~ Dr. Mel LeVan*

*Mathematics: During first semester John performed at a very high level in AP Calculus AB. In fact he set all time class records for his achievement. His assessment scores on AP material has him tracking to obtain a 5 on the AP exam in May. In fact he ended first semester with assessment scores that would have given him an AP exam score of 4 with only ½ of the course content covered. ~ Dr. Mel LeVan*
